CABLE HOUSING

Friction

"How to reducing friction force" has always been the concern to our team, this issue becomes important especially when nowadays more and more bicycles using Internally Routed Bike Frame and need low friction housings.

So now all the housings we produce are fully upgraded to pre-lubricated with oil type.

Users do not need to worry about whether it is pre-lubricated or not when selecting products, users will just have the best smoothness housing products.

“降低摩擦力”一直是我們團隊關心的問題，這個訴求變得極為重要因為現在越來越多的自行車使用內埋式走線車架需要低摩擦力管線產品。因此，現在我們生產的所有外管都已完全升級為預油潤滑。用戶在選擇產品時無需擔心是否有預先潤滑的問題，用戶將擁有最佳光滑度的外管產品。

The Advantages of Using Grease

- Better performance on lower friction.
- Semi-solid state, does not dripping.
- High temperature / low temperature resistance, Low volatility and better waterproof.
- Longer service life than the liquid oil.

採用半固態油具有以下更多優點

- 更好的低摩擦力值表現
- 呈凝固狀態，不易滴落
- 耐高溫、耐低溫、揮發性低、防水性較佳
- 較一般液態油使用壽命更長

Housing for Internally Routed Bike and Dropper Seat Post Light weight Products

內埋式變速外管與伸縮座管用外管 輕量化產品

The Internally Routed bike design is becoming the mainstream of future bicycles. Which not only makes the appearance of bicycles simple and neat, but also can reduce wind resistance.

The difficult part of this design is it requires making housing get inside and go through the frame, which often brings lots difficulty to the riders.

We improved the structure and design of our housings, managed to reduce the hardness, make the housing softer, and increase the strength of it.

So now riders can easily make housing routing through the frame, problem solved!

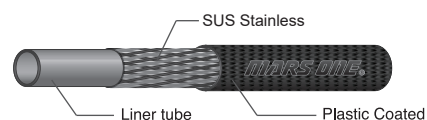

內埋式走線設計將成為未來自行車主流，不但讓車子外觀簡潔俐落，又可以達到降低風阻功效，但是受限於此設計，管線必須穿入車架內，常常帶給組車者非常大的困擾。我們改良了外管結構與設計，降低了外管的硬度，使其變得更柔軟，又增加了外管的強度，讓組車者能輕鬆穿入車架內，解決內埋式走線所帶來問題！

NEW HOUSING COATING MATERIAL

Traditional coiled steel housing is coated by PVC plastic. To meet the EU's future Restriction on limiting using PVC, We developed a new plastic composite material for Coiled steel housing.

The new coating material also provides a better performance on compression test.

傳統捲圓鋼鐵層型態的外管均使用 PVC 塑料來做包覆。但為配合歐盟未來的 PVC 塑膠禁限用限制，我們研發出新的塑膠複合材料用於外管包覆。

同時也提供更佳的外管壓縮量質表現

The background features a series of thick, diagonal lines in various colors including blue, green, red, yellow, and purple, creating a dynamic, woven pattern. Two large, solid red geometric shapes, resembling triangles, are positioned in the top right and bottom left corners. The overall composition is modern and abstract.
